

JIHN E. KIM

Prof. in Physics

11 July -12 August 2010

Prof. Jihn E. Kim is an international expert in the axion physics, the hypothetical particle that could solve the strong CP problem and could also be a candidate for dark matter. During his visit we established discussions about these subjects, but also about the possibility of a certain relation between the axion and the problem of the ultra high energy cosmic rays.
